Assessment Brief for Programming in C

ADTs: Compressed Sparse Arrays

Unit name	Programming in C
Unit code	COMSM1201
Assessment number	2 (First summative/marked)
Assessment name	2D Arrays : Crowns
Assessment prepared by	Neill Campbell
Assessment type	Coursework
Credit value	**20%** of 30cp unit
Expected time to complete	Around 1 week, very approximately.
Submission format	Via Blackboard – **one** *crowns.c* file. You can submit as often as you like, old files are automatically overwritten. I'll only mark your latest submission. Any submissions that are late (even by 1 second) are automatically given a late penalty; my feedback will not show this. Penalties are enforced by our systems not me!
Deadline	23rd October (Friday afternoon, Week 5 @ **13:00**)
Deliverable	Only one file : 1) A **single** file entitled *crowns.c.* 2) Make sure these filenames are spelled correctly and have been compiled in a terminal on a lab machine without warnings using the full set of warning flags/my *Makefile*.
Learning outcomes being assessed	• To be able to write a program, given a brief specification that compiles and executes correctly. • To be able to convert a simple algorithm into working code. • The ability to program in the C99 C standard, and in the style outlined in the house-style guidelines. • How to utilise, amongst others: Pointers and 'nested' structures. • To be able to build a program from a suite of small, well tested functions. • To be able to debug simple programs on your own.
Assessment criteria	Conformance to the house-style guidelines, assert testing, short readable functions, array-boundary checking.
Academic integrity	Your submission must be **entirely your own work**. Copying from AI, other students, or external sources counts as plagiarism and will be treated as cheating under University policy.
Additional resources	"Live" Q&A sessions, previous week 4 & 5 exercises.
Support for this assignment	6 hours of labs in week 5.
Additional advice to students	Use house-style guidelines. DO NOT wait until the end to do testing – it will be obvious and have had no impact on the style of the program. **If your code doesn't work, add a comment at the top and submit it anyway – your style/structure is still worth marks.**
Feedback mode/method	Brief written feedback from Neill, and, additionally, at any time verbally during lab sessions.
Planned feedback date	Maybe as early as Friday week 7 (?).
Useful previous feedback	The week 3 formative assessment
Future feedback use	Next assignment (Search/Sort)
